## **Blood Thinning Medication policy**

Advanced Pain Solutions requires blood thinning medications (Coumadin, Plavix, Xarelto, etc.), to be stopped for a period of time before certain procedures.

We will consult with the doctor who prescribes your blood thinning medication regarding the amount of time that it is safe for you to hold your medication. Please do not stop taking your blood thinning medication until you hear from us.

Not all medical facilities have the same policies regarding blood thinning medications. If you do not hold your medication, we may have to reschedule your injection. Having certain procedures done without stopping your blood thinning medications can be potentially dangerous.

Please call our office if you have any questions or concerns: 1-616-841-2615
